

**DEPARTMENT OF CIVIL AVIATION
MALAYSIA
AIRWORTHINESS NOTICE**

No: 95	Issue: 1	Page: 1
---------------	-----------------	----------------

Date: 1 September 2005

DISPOSITION OF SCRAP AIRCRAFT PARTS AND MATERIALS

1. PURPOSE

The purpose of this Airworthiness Notices to provide information and guidance to persons involved in the maintenance, sale, or disposal of aircraft parts. It provides information and guidance to prevent scrap aircraft parts and materials from being sold or acquired as serviceable parts and materials.

2. INTRODUCTION

It is common practice for owners of aircraft parts to dispose of scrap parts and materials by selling, discarding, or transferring such items. In some instances, these items have reappeared for sale in the active parts inventories of the aviation community. Misrepresentation of the status of parts and material and the practice of making such items appear serviceable could result in the use of non conforming parts and materials.

3. TYPES OF PARTS AND MATERIALS THAT MAY BE MISREPRESENTED

Persons disposing of scrap aircraft parts and materials should be considered the possibility of such parts and materials being misrepresented and sold as serviceable at a later date. Caution should be exercised to ensure that the following types of part and materials are disposed of in a controlled manner that does not allow them to be returned to service.

- a) Parts with non-repairable defects, whether visible or not to the naked eye.
- b) Parts that are not within the specification set forth by the approved design, and cannot be brought into conformance with the applicable specification.
- c) Parts and materials for which further processing or rework cannot make them eligible for certification under a recognized released system.
- d) Parts subjected to unacceptable modification or rework that is irreversible.
- e) Life-limited parts that have reached or exceeded their life limits, or have missing or incomplete records.
- f) Parts that cannot be returned to an airworthy condition due to exposure to extreme forces or heat. (See Airworthiness Notice No. 13 and 14)
- g) Principal Structural Elements (PSE) removed from a high-cycle aircraft for which conformity cannot be accomplished by complying with the mandatory requirements applicable to ageing aircraft.

4 METHODS TO PREVENT MISPRESENTATION OS SCRAP PARTS AND MATERIALS

4.1 Persons disposing of scrap parts and materials should, when appropriate, mutilate those parts and materials prior to release. Mutilation should be accomplished in such a manner that the parts become unusable for their original intended use, nor should they be able to be reworked or camouflaged to provide the appearance of being serviceable, such as by re-plating, shortening and re-threading long bolts, welding, straightening, machining, cleaning, polishing, or repainting.

4.1.1 Mutilation may be accomplished by one or a combination of the following procedures, but is not limited to :

- a) Grinding;
- b) Burning;
- c) Removal of a major lug or other integral feature;
- d) Permanent distortion of parts;
- e) Cutting a hole with a torch or saw;
- f) Melting;
- g) Sawing into many small pieces.

4.1.2 The following procedures are examples of mutilation that often less successful because they may not be consistently effective : -

- a) Stamping (such as a stamped 'Reject' on a part);
- b) Spraying with paint;
- c) Hammer marks;
- d) Identification by tag and markings;
- e) Drilling small holes;
- f) Sawing in two pieces. Persons who rework scrap parts and materials may be skilled technicians and attempt to restore parts cut in two pieces in such a manner that the mutilation proves difficult to detect.

- 4.2 Persons disposing of scrap aircraft part and materials for legitimate non-flight uses, such as training and education aids, research and development, or for the non-aviation applications. In such instances, mutilation is not appropriate and the following methods should be used to prevent misrepresentation :-
- Permanently marking or stamping the parts, subparts and material as 'NOT SERVICEABLE'. (Ink stamping is not an acceptable method);
 - Removing original part number identification;
 - Removing data plate identification;
 - Maintaining a tracking or accountability system, by serial number or other individualized data, to record transferred scrap aircraft parts and materials; and
 - Including written instructions concerning disposition and disposal of such parts and materials in any agreement or contract transferring such parts and materials.

NOTE: Scrap or expired life-limited parts and materials should not be passed on to any person or organization who may end up placing the parts and materials back in actual use, due to critically of parts and material failure and the potential safety threat.

- 4.3 Organizations handling up scrap or expired life-limited aircraft parts and materials should be establish a quarantine store area in which to segregate such items from active serviceable inventories and to prevent unauthorized access. Caution should be exercised to ensure that these parts and materials receive the disposition specified in the Notice.
- 4.4 Manufacturers producing approved aircrafts should be considered maintaining records of serial numbers for 'retired' life-limited or other critical parts. In such cases, the owner who mutilates applicable parts is encouraged to provide the original manufacturer with the data plate and/or serial number and final disposition of the part.

5 METHOD TO IDENTIFY MISREPRESENTED PARTS

All purchasers of aircraft parts and materials should ensure that misrepresented scrap parts and materials are not received into active inventory. The following are examples of conditions to be alert for when receiving parts: -

- Parts showing sign of rework which were purchased as 'new'.
- Used parts showing signs of unapproved or inappropriate repair.
- Parts with poor workmanship or signs of rework in the area of the part data plate, number or serial number inscription.
- Used parts lacking verifiable documentation of history and approval.
- Parts with prices 'too good to be true'.
- Questionable part numbers, fraudulent and suspicious Technical Standard Order or FAA Parts Manufacturer approval markings and/or re-identification, stamps-overs or vibro-etching on the data plate.
- Parts delivered with photocopied or missing FAA 8130-30, JAA Form 1 or other acceptable release documentation.
- Parts with a finish that is inconsistent with industry standards (e.g. discoloration, inconsistencies, resurfacing)
- Parts purchased as new but with release documentation reflecting a status or other than new.
- Parts with poor documentation exhibiting incomplete or inconsistent part identity information.
- Intact 'scrap' unsalvageable parts offered in bulk weight for prices higher than mutilated parts with identical weight and content.

NOTE: Suspected Unapproved Parts Notification can be found on FAA Internet address: <http://www.faa.gov/avr/sups.htm> and Special Airworthiness Information Bulletins can be found on FAA Internet address: <http://av-info.faa.gov>

An approved organization or LAME who receives suspect parts should report to the DCA as detailed in paragraph 5 of Airworthiness Notice No. 19.

6 APPLICABILITY

Approved organization and LAME involved in maintenance of aircraft are encouraged to adopt the content of this Notice into internal standard operating procedures.
